3. This Section specifies administrative and procedural requirements for submittals required for performance of the work, including:
a. Contractor's Progress Schedule
b. Shop Drawings, Product Data, and Samples
c. Letters of Conformance
d. Certificates
e. Manufacturer Installation Instructions
4. Substitution Procedures
5. Manuals
6. Miscellaneous Submittals
B. Related Documents:
1. Letter of Conformance Form
2. Contractor's Substitution Request Form
C. Related Sections:
1. Contractual Requirements for Submittals: General Conditions

A. Coordination: Coordinate preparation and processing of Submittals with performance of construction activities. Transmit each Submittal sufficiently in advance of performance of related construction activities to avoid delay.
1. Coordinate each Submittal with fabrication, purchasing, testing, delivery, other Submittals and related activities that require sequential activity.
2. Coordinate transmittal of different types of Submittals for related elements of the work so processing will not be delayed by the need to review Submittals concurrently for coordination.
a. The Architect reserves the right to withhold action on a Submittal requiring coordination with other Submittals until related Submittals are received.
b. No extension of Contract Time will be authorized because of failure to transmit Submittals to the Owner's Representative sufficiently in advance of the work to permit processing.
B. Deliver Submittals to the Architect.
C. Submittal Preparation: Place a permanent label or title block on each Submittal for identification. Indicate the name of the entity that prepared each Submittal on the label or title block.
1. Provide a space approximately 10" x 10" on the label or beside the title block on Shop Drawings to record the Contractor's and Architect review and approval markings and the action taken.
2. Include the following information on the label for processing and recording action taken:
a. Project Name
b. Name of the Owner
c. Date
d. Name and Address of Architect
e. Name and Address of Contractor
f. Name and Address of Subcontractor or Vendor
g. Location Where Item is to be Used
h. Name of Manufacturer

3. Identify Project, Contractor, Subcontractor or supplier; pertinent drawing and detail number, and specification section number, as appropriate.
4. On the transmittal, record relevant information and requests for data. On the form, or separate sheet, record deviations from Contract Document requirements, including minor variations and limitations. Include Contractor's certification that Contractor has reviewed the Submittal and verified that the information submitted complies with the Specifications and all other Contract Document requirements.
5. After Architect's review of Submittal, revise and resubmit as required, identifying changes made since previous Submittal.
6. When re-submittal is required for any reason, transmit under new letter of transmittal, indicating by reference to a previous Submittal that this is a re-submittal.
a. Identify on submittal all changes made since previous submission.
7. Distribute copies of reviewed Submittals to concerned persons. Instruct recipients to promptly report any inability to comply with provisions.

All Submittals shall bear the stamp of approval of the Contractor submitting same as evidence that they have been checked by him, or they will be rejected.
a. Must be signed or initialed certifying that review, verification of Products required, field dimensions, adjacent construction Work, and coordination of information, is in accordance with the requirements of the Work and Contract Documents.
9. Schedule submittals to expedite the Project, and deliver to Architect. Coordinate submission of related items. Instruct parties to promptly report any inability to comply with provisions.

1.03 PROGRESS SCHEDULES
A. Submit initial Construction Progress Schedule in duplicate within 14 days after date of Owner-Contractor Contract. Submit in the form required by the General Conditions of the Contract.
B. Revise and resubmit as required.
C. Submit revised schedules with each Application for Payment, identifying changes since previous version.

1.04 LETTERS OF CONFORMANCE
A. Letter of Conformance: Short-form informational submittals which are to be used instead of shop drawings, product data and samples. They are also to be used to supplement shop drawings, product data and samples. A sample "Letter of Conformance" is located at the end of this Section. Use copies of this form for each submittal unless a more specific Letter of Conformance is located at the end of a particular Specification Section.
B. Within 30 days after date of Owner-Contractor Agreement, submit all Letters of Conformance indicating Contractor's selections for products proposed for use, with name of manufacturer, trade name, and model number of each product. For products specified only by reference standards, give manufacturer, trade name, model or catalog designation, and reference standards.
C. Procedure:
1. Submit the number of copies which the Contractor requires, plus two copies which will be retained by the Architect. Subject to the approval of the owner, all documents can be submitted electronically in .pdf file format would be acceptable. Scanned image of the sample in lieu of actual products would not be acceptable.
2. Submit completed Letter of Conformance for products selected as indicated within each Section.
3. Fill-in required information on form and sign in ink by person authorized to sign on behalf of the Contractor. If pdf files are submitted. Scanned or digital signatures would be acceptable.
4. Clearly identify applicable products, characteristics, models, and options. Attach supplemental information including product data to each Letter of Conformance as necessary to communicate all information specific to the product.
5. No modifications to form permitted.
6. Letters of Conformance are not to be used for substitution requests.
D. By submitting a Letter of Conformance, Contractor declares that the product identified by manufacturer's name and model number:
1. Is one of the product(s) specified
2. Is suitable for the intended use as defined within the Contract Documents, and
3. Will be provided and placed in operational condition in accordance with the Contract Documents and manufacturer's published instructions.

1.05 SHOP DRAWINGS
A. Where Shop Drawings are required, submit newly prepared information drawn to accurate scale. Highlight, encircle, or otherwise indicate deviations from the Contract Documents. Do not reproduce Contract Documents or copy standard information as the basis of Shop Drawings. Standard information prepared without specific reference to the Project is not considered Shop Drawings.
B. Shop Drawings shall be drawn at a scale to clearly indicate all of the above conditions and allow for corrections or modifications which the Architect may wish to make. The Architect shall be the sole judge as to the acceptability of manufacturer's literature and catalog sheets as Shop Drawings.
C. Shop Drawings shall clearly indicate all dimensional data for all parts of the item; types and materials for all connections; finishes; the exact relation of the item to adjacent materials and equipment in the completed structure including clearance, any necessary isolation, and fastening methods and devices; and mechanical and electrical connections.
D. Shop Drawings include fabrication and installation Drawings, setting diagrams, schedules, patterns, templates, and similar Drawings. Include the following information:
1. Dimensions

A. Source Limitations: To the greatest extent possible for each unit of work, provide products, materials, or equipment of a singular generic kind from a single source.
B. Compatibility of Options: Where more than one choice is available as options for Contractor's selection of a product or materials, select an option which is compatible with other products and materials already selected (which may have been from among options for those other products and materials). Total compatibility among options, if not assured by limitations within contract documents, must be provided by Contractor. Compatibility is a basic general requirement of product/material selections.

   2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
   3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. Felt Underlayment: Install felt underlayment, wrinkle free, using adhesive to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches (50 mm).

B. Synthetic Underlayment: Install synthetic underlayment, wrinkle free, according to manufacturers' written instructions, and using adhesive where possible to minimize use of mechanical fasteners under sheet metal.

C. Apply slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trim.

3.3 INSTALLATION, GENERAL

A. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
   1. Coat concealed side of uncoated-aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
   2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.

B. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet (3 m) with no joints within 24 inches (600 mm) of corner or intersection.

C. Fasteners: Use fastener sizes that penetrate wood blocking or sheathing not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws.

D. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

E. Seal joints as required for watertight construction.
   1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than 1 inch (25 mm) into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).
   2. Prepare joints and apply sealants to comply with requirements in Section 07920 "Joint Sealants."

3.4 ROOF-DRAINAGE SYSTEM INSTALLATION

A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.

B. Parapet Scuppers: Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
   1. Anchor scupper closure trim flange to exterior wall and seal with elastomeric sealant to scupper.

3.5 WALL FLASHING INSTALLATION

A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. Through-Wall Flashing: Installation of through-wall flashing is specified in Section 04810 "Unit Masonry Assemblies."

C. Reglets: Installation of reglets is specified in Section 03300 "Cast-in-Place Concrete." Section 04810 "Unit Masonry Assemblies."

D. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches (100 mm) beyond wall openings.

3.6 MISCELLANEOUS FLASHING INSTALLATION

A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans: Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

3.7 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.8 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.

D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

B. ON-OFF CONTROL

1. AIR HANDLING UNITS SHALL BE AUTOMATICALLY STARTED AND STOPPED BY THE BUILDING SYSTEM CONTROL PANEL.

C. NORMAL MODE OPERATION - COOLING

1. A SPACE MOUNTED SENSOR SERVING THE RESPECTIVE AIR HANDLING UNIT SHALL SENSE THE SPACE TEMPERATURE AND SEND A SIGNAL TO THE BUILDING SYSTEM CONTROL PANEL. CONTROL PANEL SHALL ENERGIZE THE COMPRESSORS AND CONDENSER FANS AS REQUIRED TO MAINTAIN SPACE TEMPERATURE SET POINT. HEATING SYSTEM SHALL BE DE-ENERGIZED WHEN IN COOLING MODE. COOLING SYSTEM SHALL BE DE-ENERGIZED WHEN SUPPLY FAN IS OFF.

2. CO2 SENSOR SERVING THE RESPECTIVE AIR HANDLING UNIT SHALL SENSE THE AMOUNT OF CARBON DIOXIDE IN THE ZONE AND SEND A SIGNAL TO THE CONTROL SYSTEM PANEL. WHEN THE MEASURED CO2 VALUE IS ABOVE 1000PPM (ADJ) FOR MORE THAN 5 MINUTES, THE CONTROL SYSTEM PANEL SHALL MODULATE THE OUTSIDE AIR DAMPER TOWARDS ITS MAXIMUM POSITION EQUAL TO THE AHU'S SCHEDULED OUTSIDE AIR VALUE. THE CONTROL SYSTEM PANEL SHALL MODULATE THE RETURN AIR DAMPER ACCORDINGLY TO PROVIDE THE SCHEDULE AMOUNT OF SUPPLY AIR FOR THE AHU. WHEN THE MEASURED CO2 VALUE IS LESS THAN 800PPM (ADJ) FOR MORE THAN 5 MINUTES, THE CONTROL SYSTEM PANEL SHALL MODULATE THE OUTSIDE AIR DAMPER TOWARDS ITS MINIMUM POSITION EQUAL TO 30% OF THE AHU'S SCHEDULED OUTSIDE AIR VALUE.

D. NORMAL MODE OPERATION - HEATING

1. A SPACE MOUNTED SENSOR SERVING THE RESPECTIVE AIR HANDLING UNIT SHALL SENSE THE SPACE TEMPERATURE AND SEND A SIGNAL TO THE BUILDING SYSTEM CONTROL SYSTEM PANEL. CONTROL PANEL SHALL ENERGIZE THE GAS HEATING SYSTEM, HEAT PUMP SYSTEM, OR ELECTRIC HEATING COIL AND FANS AS REQUIRED TO MAINTAIN SPACE TEMPERATURE SET POINT. COOLING SYSTEM SHALL BE DE-ENERGIZED WHEN UNIT IS IN HEATING MODE.
